

Quick-Silver™

Trip Edge Snowplows

The Air-Flo® Quick-Silver™ Trip Edge Snowplow is designed to plow through the heaviest snowfall. This rugged design is available in 8' and 9' options and is manufactured to the same rigid standard as our full trip plow.

The trip edge design using rugged 13" x 3" x 3/8" compression springs, enables just the cutting edge to trip while leaving the moldboard upright...and the snow where it belongs, in front of the blade. The **compression springs** allow for faster tripping action, a better cushion on the return and are more reliable than extension spring set-ups. This design is great for stacking large piles of heavy wet snow.

The Air-Flo® Trip Edge Snowplow will tackle the heaviest accumulation of snow, regardless of the obstructions that lie underneath.

Manufactured of rugged silver powder coated carbon steel, our Trip Edge plow comes with the same standard equipment as our full trip blades, and features our exclusive Quick-Latch® mounting system.

Model	Blade Steel	Blade Width	Blade Gauge	Compression Springs	Plowing Width (Angled)	Approx. Weight (Less Mount)	Cutting Edge
QSC-80-TE	Carbon	8'	11	4	6' 11"	875	3/8" x 6"
QSC-90-TE	Carbon	9'	11	4	7' 11"	900	3/8" x 6"

Air-Flo® Trip Edge Snowplows are not recommended for 1/2 ton truck applications and should only be used on vehicles with vehicle manufacturer's snowplow preparation package. All vehicles equipped with an Air-Flo® Snowplow must comply with the vehicle manufacturer's published specifications for equipment application. Do not exceed vehicle weight ratings with an Air-Flo® Snowplow.

Air-Flo® reserves the right under its product improvement policy to change construction or design details and furnish equipment so altered without reference to illustrations or specifications used.
